DVE Highlights – Cloud Services from HPE GreenLake

The **HPE GreenLake Cloud Services** are cloud services for **containers, machine learning operations, virtual machines, storage, compute, data protection and networking**. All those services are accessible via a self-service point and click catalogue on **HPE GreenLake Central**, which is a platform where customers can request a trial on each cloud service; spin up instances and clusters in a few clicks; and manage their multi-cloud estate from one place. Based on pre-integrated building blocks, the new HPE GreenLake cloud services are **available in small, medium, and large configurations**, delivered to customers **from order to run in 14 days.**

DVE Highlights – HPE Ezmeral- New Software Brand

Why Ezmeral? The word Ezmeral is a derivative of the Spanish word for emerald: esmeralda. Emeralds have mythical powers of strengthening intelligence, predicting future events, easing stress, and enhancing immunity. Similarly, our **HPE software** is uniquely positioned to help our customers as they navigate these challenging times, and prepare for this rapidly changing digital future—leveraging AI and data-driven innovation with HPE OneView, HPE Infosight, HPE Ezmeral Data Fabric and HPE Ezmeral Container platform.

DVE Highlights – HPE Cloud Volumes Backup

HPE Cloud Volumes Backup is a new backup service that consolidates backup data in the cloud using **HPE Cloud Volumes**. It provides bi-directional data mobility to and from on-premise and the cloud without the typical egress costs of moving data from the public cloud. HPE Cloud Volumes Backup uses the Catalyst engine from **HPE StoreOnce to connect to ISV backup software** from Commvault, Veeam, Veritas, MicroFocus and others.
